Funtional Requirements

1. User can swipe Left/Right to a Profile
2. User can setup his/her own profile
3. User can set his/her preference
4. Once there is a match they can chat in chatroom.
5. User can see all the profiles near their location. (Nearby can be based on different Strategy)
6. User should get notified when there is a match or receive new message
7. User matching should be based on several factor & scores (like interest match, location match etc).

Happy flow

Here we do Top-Down Approach

B/c in this there are multiple

B/C for this [illegible]
small-small objects.
So, it's better to use

Clean UML — See Notes

Code → See Notes.
