Problems in 10 min Delivery App

- You order something it may not be present at nearest Dark Store

  So, it moves to 2nd nearest Dark store.

- Some items present at nearest Dark store and other at 2nd nearest Dark Store.

  So, Multiple delivery Partner will be assigned.

↓

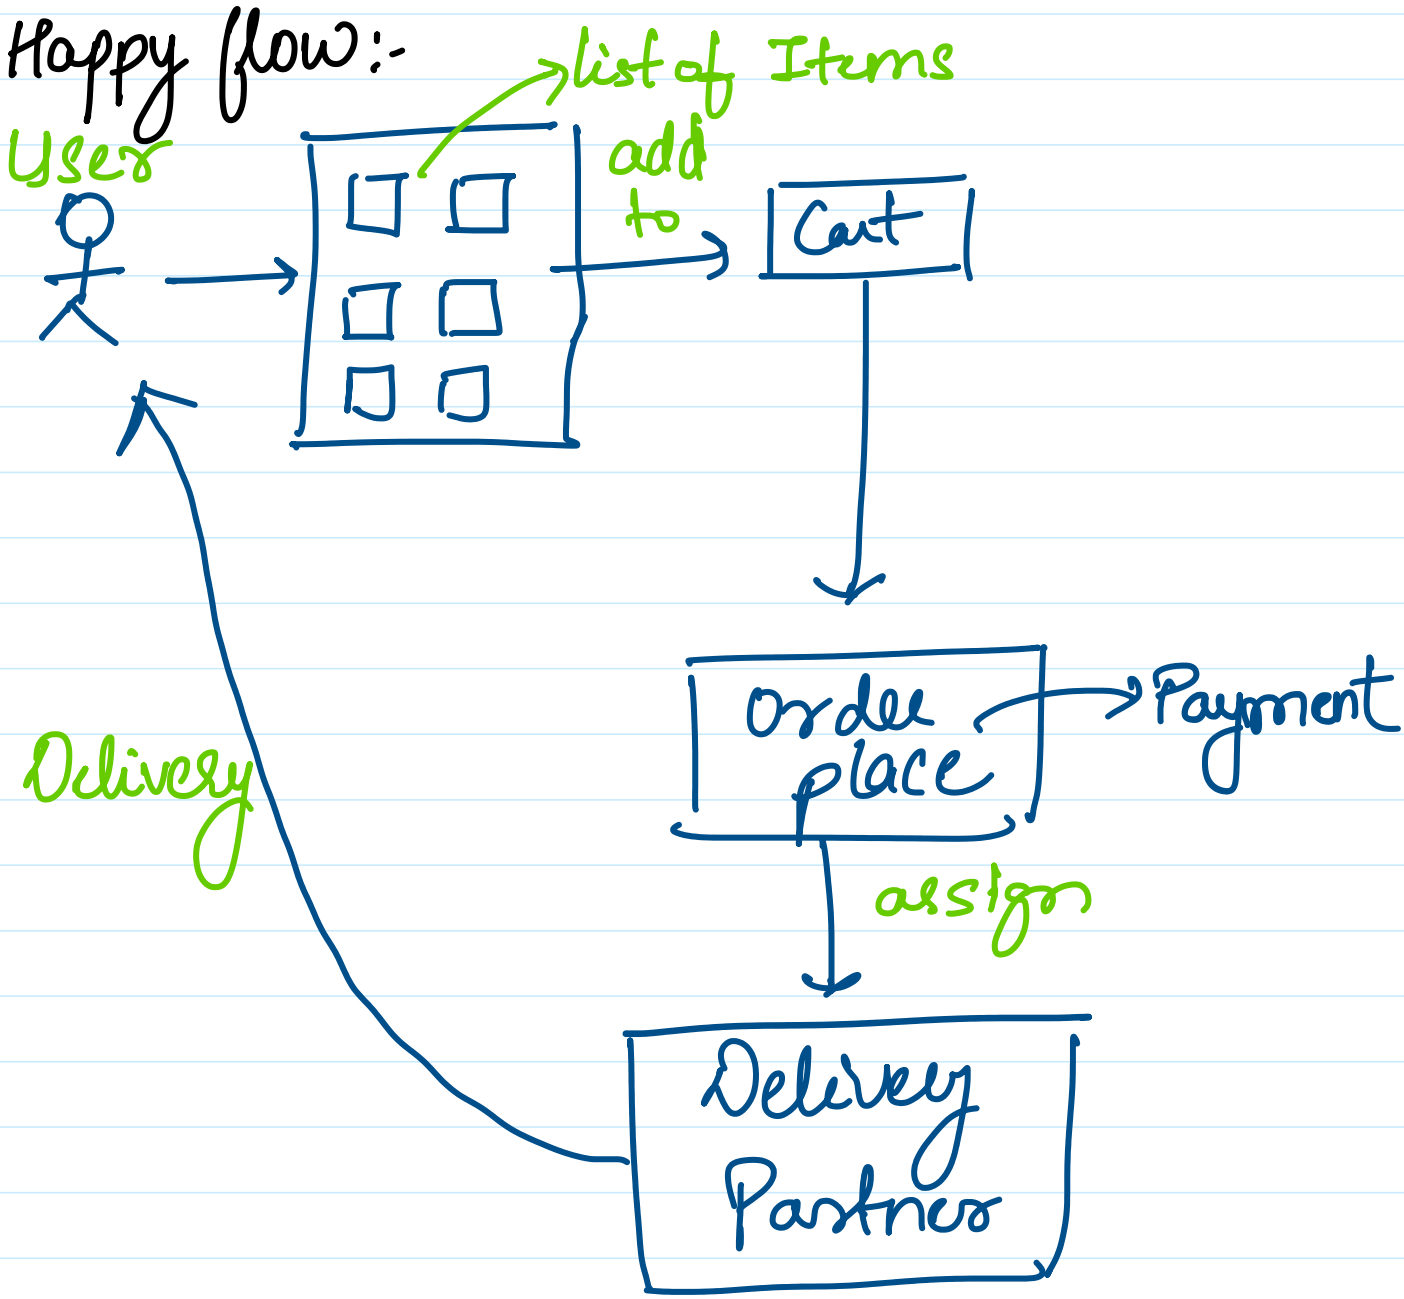

This is what we called "Inventory Management"

Requirements :-

1. We should be able to manage Inventory (Add / Remove items)
2. We should have Replenish strategies (Threshold, weekly) & should be Scalable.
   - Re-filling the Inventory (Diff. ways)
3. We can have multiple Inventory store (like DB Inventorystore etc) & can be further extended
   - We can store Inventory in DB or some-where else.
4. We should be able to see items from all the Darkstore closer to him/her (≤ 5 km).
5. If one Darkstore cannot fulfill order, one order can be split into multiple DS, fulfilled by Multiple Delivery Agents.

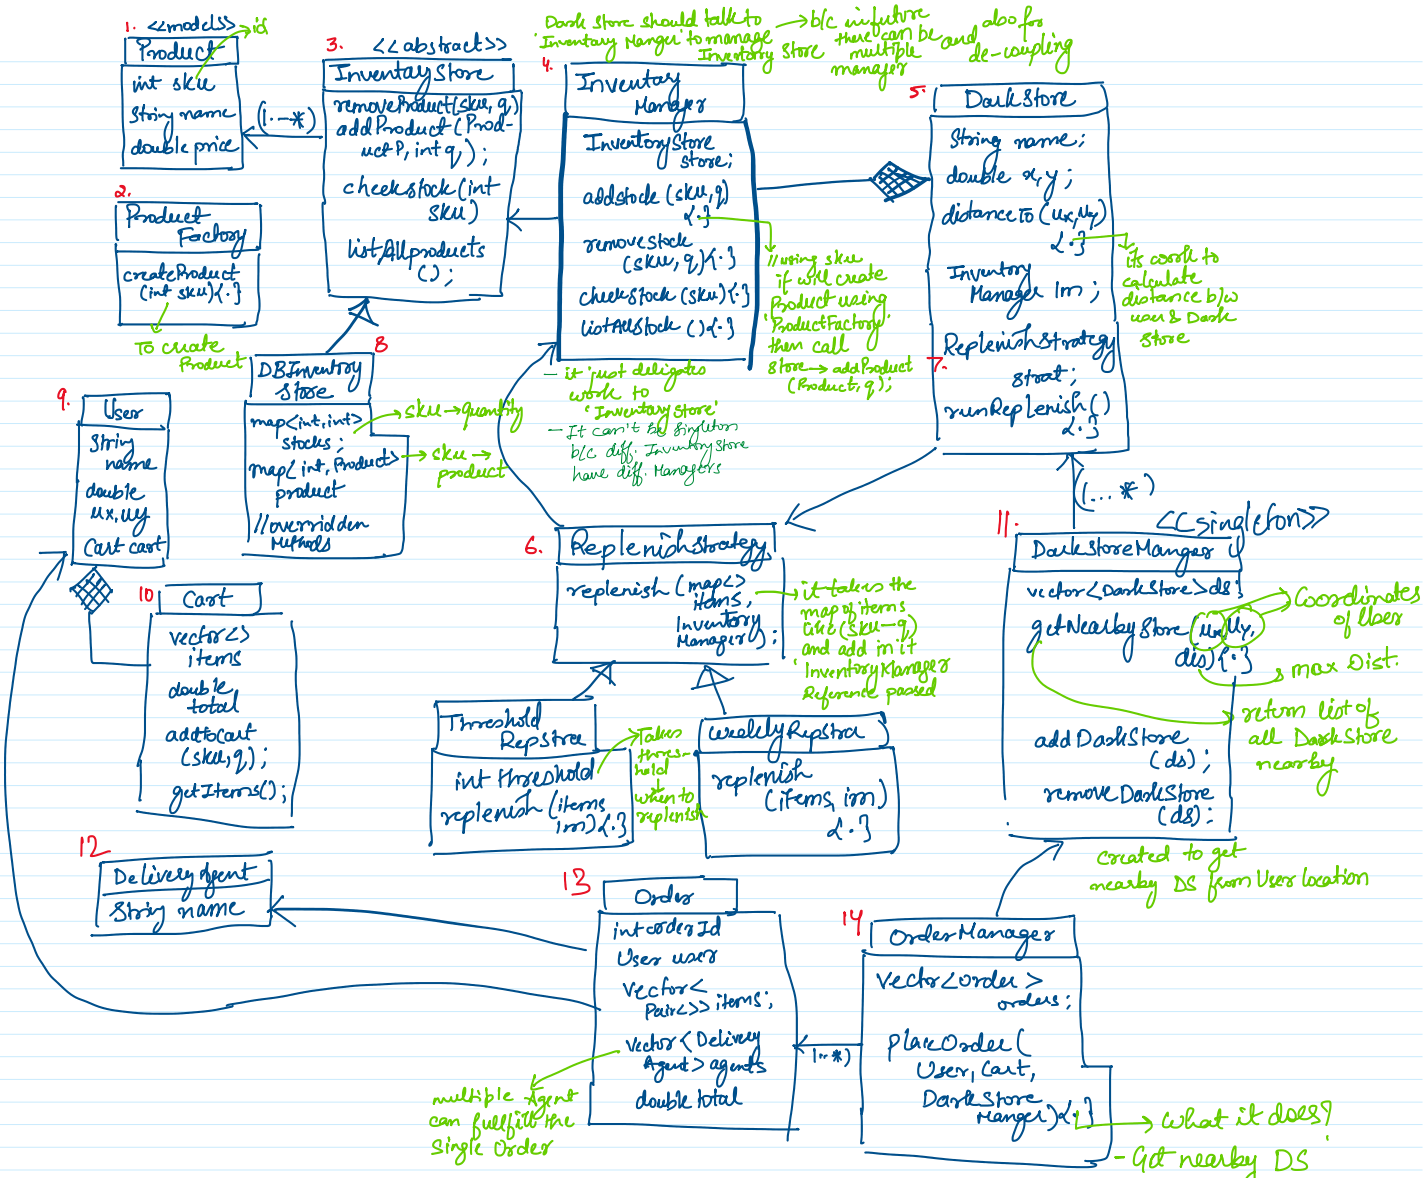

Happy flow

Clean UML → see Notes.

Code → see Notes

Extension

1. Add Rider Mapping Algorithm
2. Add a payment / Coupon Meachanism
3. Make a Code - Modular
